

Given KASD's situation:
Three aging schools
Approximately \$51 million in unfunded facility needs
Existing Performing Arts Center and other current debt
Concerns about placing additional burdens on already heavily taxed taxpayers

**"What is the least expensive, financially sustainable path
for this community over the next 50 years,
and what will each option actually cost
the average taxpayer?"**

The Nexus answer must be presented as a **clear timeline**, showing when each school is addressed, when each debt obligation begins and ends, and when taxpayers would be carrying

We expect our expert financial planner to tell the district not only

"Can we afford this?" but also

**"What will this decision prevent us from being able to afford
10, 20, and 30 years from now?"**
